

Design Technology Curriculum Map

In Design and Technology our curriculum is designed to encourage creativity with a core focus on skills and technical knowledge. Our intent is to educate our students to be knowledgeable about product design with an understanding of how companies and communities are impacted by this vast design industry. We ensure a range of materials are revisited each year to build on depth of understanding, independence and safety within the workshop. We encourage our students to be challenged with problem solving tasks whilst developing skills in the workshop and in CAD.
